Automated Lift Trucks provide a solution to do more with less, and deliver flexibility that can meet changing operational demands.

In today’s warehouse environment, management is tasked with the challenge of finding new ways to reduce costs while increasing operational efficiency. In other words, to do more with less. That means getting the most out of every resource. Labor continues to lead operational expenses at 72% of lift truck ownership costs.

Facing this problem, management often looks to improve its cost of doing business by maximizing work force productivity. Raymond® Automated Lift Trucks (ALT™) are a new category of reliable, locally serviced lift trucks that offer a material handling solution to improve productivity and labor optimization within the warehouse. They are also the beginning of the next generation of lift trucks.

MULTIPLY LABOR
DIVIDE COSTS.
Automated guided vehicles (AGVs) have always needed expensive, complex, custom-built systems that require substantial time, support and infrastructure, such as magnetic tape, wires and integration with a warehouse’s current technology. Until now.

The first members of the Raymond ALT fleet are the Raymond Courier center rider pallet truck and tow tractor. Built on Raymond’s established 8000 Series pallet truck family, the Raymond Courier is the first truck that makes automation easy. Because they’re built on Raymond’s tried-and-true truck design, the Raymond Courier is fully supported and serviced by Raymond’s nationwide network of authorized Sales and Service Centers – for one-stop service and support.

SIMPLICITY FOR PRODUCTIVITY’S SAKE.

Working in tandem with your current fleet, the Raymond Courier performs at the high level expected of any automated solution. Vision-guided technology captures image data from its surroundings and records everything from turn locations, changes in speed, and even when and where to unload a pallet. Horizontal travel functions, such as pauses, stops, and pallet drop-offs, can be easily programmed into any route.

With an easy-to-use interface, programming up to 15 miles of routes is a simple task for any operator. For increased flexibility, routes for different times of day, shifts, or even seasons can be easily transferred between trucks with a USB drive.

Not only is the Raymond Courier simple to use—it’s simple to maintain. Durable construction keeps the Raymond Courier up and running, while thoughtful design provides quick and easy service access.

Raymond Courier Automated Lift Trucks are ideal for repetitive and time-consuming tasks that are labor intensive but don’t require skilled attention, such as cross-docking and put-away operations. Multiple Raymond Courier Automated Lift Trucks can work smoothly under the supervision of just one operator.

Our exclusive ACR System™ delivers longer battery run-time, and has fewer components than similar AC units, for less downtime and lower maintenance costs.

Vision-guided technology captures and records image data that is used to replicate a route in automated mode.

Program up to 15 miles of routes and change as needed with the easy-to-use operator interface.

The durable undercarriage is designed with ductile iron and solid steel components to withstand the most demanding applications year after year.

Eco-Performance delivers efficiency and productivity with every pallet move—from the right-sized drive motor to the energy efficient materials that eliminate non-value added weight.
With the Raymond Courier, one operator can simply and successfully manage several trucks. It’s just one way that the Raymond Courier optimizes labor costs for warehouse management. And it frees up resources to focus on other tasks.

That means better fleet and operator allocation for greater operational and labor productivity. It also means that an operator can move more pallets in the same amount of time by managing multiple Raymond Courier Automated Lift Trucks. Consider it Raymond’s way of making sure you get the most out of every resource.

The Raymond Courier was designed to deliver the efficiency and productivity that Raymond products are known for. We call it Eco-Performance. You’ll call it economizing without compromise. And Raymond’s exclusive ACR System uses less energy than comparable AC systems. This allows for more uptime and keeps recharging time and energy costs to a minimum.

RUN LAPS AROUND THE COMPETITION OR ANY ROUTE YOU WANT.

Program typical horizontal travel functions such as pauses, stops, horn hons and pallet drop-offs.
Our extensive nationwide network of authorized Sales and Service Centers delivers local support and direct service of Raymond Automated Lift Trucks. Staffed by professional, highly-trained technicians, and located in more than 100 key locations throughout North America, our Sales and Service Center network is ready to provide the support, knowledge and resources you need to improve efficiencies, uptime and overall productivity throughout your operations.

As a material handling innovator, Raymond provides solutions to help optimize your entire operation – so you’ll have access to some of the industry’s most innovative technologies and support systems. Furthermore, Raymond is the only lift truck manufacturer of automated lift trucks to provide direct service and support to its customers, there’s only one name to trust in the industry. Ours.

Since incorporating new technologies into your operation can mean dealing with a lot of unknowns, Raymond provides the tools and guidance you need to make automated lift trucks a staple of your everyday operation. Additionally, Raymond’s Safety On The Move® and Steps To Safety™ programs allow you to satisfy your B56.5 operator and pedestrian training requirements.
With Raymond Courier Automated Lift Trucks, your operations will flow smoothly. Your productivity will increase. And every dollar you spend on labor will be maximized. The Raymond Courier paves the way for a new category of lift trucks. As warehouse managers bring more Raymond vehicles into their fleet, warehouses become more efficient. And you can count on Raymond to continue to be a leading innovator in the material handling industry. Contact your local Raymond authorized Sales and Service Center for an on-site consultation to see if the Raymond Courier is right for your operations.
IT’S ALL ABOUT

RESULTS.

You need to be knowledgeable about all of your operations in order to run a fully-optimized warehouse. The iWAREHOUSE® fleet and warehouse optimization system provides visibility into fleet and operator data that improves productivity and operational efficiencies – whether you’re running Raymond trucks or a mixed fleet, in one warehouse or across multiple locations.

It turns any laptop, desktop, smartphone or tablet into a management control center by providing visibility through a unique, single-view web portal – the iWAREHOUSE GATEWAY®. And by integrating with the iWAREHOUSE Labor Management System and utilizing our tailored consulting services, you’ll have further visibility into the costs associated with specific work functions and long-term data trending analyses.

Choosing iWAREHOUSE means you have a set of solutions that provide you with a steady stream of actionable information across the entire enterprise, from the warehouse floor to the corner office.

iWAREHOUSE®
